

Venue.™

Ultrasound for the critical moment.

gehealthcare.com

FOCUSING ON
THE CRITICAL
PATIENT

Shock
IN ITS MANY FORMS,
is a **leading cause**
of death
around the world¹

RECOGNIZING THE CRITICAL CAREGIVER

- The economic and clinical challenges of managing patients in shock has been well-documented in academic literature.^{2,3}
- Applying those findings to the daily use of ultrasound has been difficult to achieve.
- GE is closing the gap between what is possible and what can be delivered in critical care settings.

SIMPLIFYING ULTRASOUND

Ultrasound is useful in helping you identify the cause of shock. But it can require many manual steps and the guidelines can be complex. Venue, a new ultrasound system, simplifies complicated steps.

Designed for many applications.

Venue is a multi-purpose, point of care system that is also well-suited to help you manage patients in shock. It includes automated tools that enable you to quickly get the information you need to make fast decisions when triaging patients in medical shock.

Our Shock Toolkit is a set of features that focus on some key indicators of patient status – the heart, lungs and IVC. It is designed to assist you in gaining insights needed to help in the determination of the cause of shock.

FAST ASSESSMENT FOR TOUGH DECISIONS

Our Auto B-line tool makes short work of assessing extravascular lung water. The Auto VTI tool helps you assess flow through the left ventricular outflow tract. And the Auto IVC tool makes assessment of the IVC collapsibility surprisingly simple. You stay in charge – approving or discarding the result according to your judgment.

Are the lungs wet?

The **Auto B-line** tool highlights and counts B-lines in real-time. Hit freeze and Venue displays the frame with the highest B-line count. The Lung Tool keeps track of your segmental lung assessment. Like the other tools, it can be helpful in showing trends in response to therapy.

Is the tank empty?

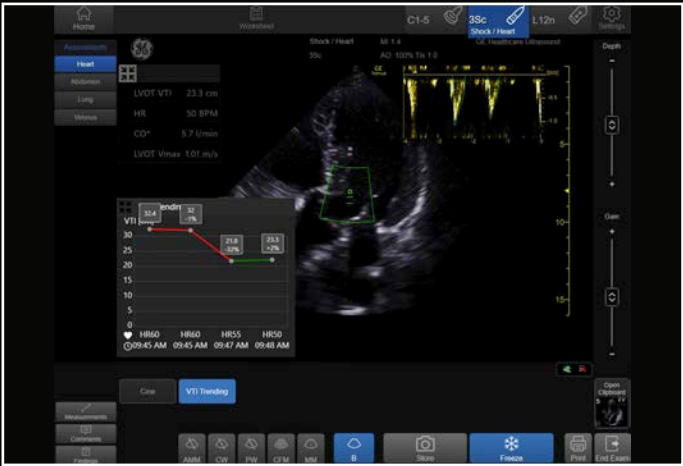

The **Auto-IVC** tool measures IVC collapsibility. IVC diameter changes are measured and displayed in real-time upon completion of each respiratory cycle.

Is the pump failing?

The **Auto-VTI** tool calculates the velocity time integral (VTI) and cardiac output in a single step. Like the other tools, it includes a quality indicator to assist with image acquisition.

Did my intervention work? Is the patient status changing?

After running the Auto VTI tool, **VTI Trending** will allow you to quickly visualize the trend and help you determine a next course of action in treatment.

Product and features may vary by country. Check with your local GE Sales Representative regarding availability.

DESIGNED FOR THE EMERGENCY DEPARTMENT AND CRITICAL CARE

Simple. Fast. Precise.

Convenient button probe

Control the system with programmable buttons on the probe handle. Three-handed procedures become two-handed procedures.

Ready when you need it

Up to 4-hour battery and easy to see count-down timer changes color when you are running low.

19" articulating monitor

See the image across the room; reposition it for procedures.

Seamless flat display

Make cleaning a breeze.

Just go to work

It is a cockpit, but not complicated.

Backed by a multi-year warranty*

Support you can count on.

Designed for cable management

Four probes connected and ready to go. Probe hangers help keep cables off the ground.

Big wheels. Small footprint.

Maneuver Venue where you want it.

* Availability may vary by country – check with your local GE Sales Representatives to confirm your local service offering.
